

New York Aquarium

Owner – Wildlife Conservation Society
Project Executive Director – Ray Davis

Concept

In order to meet escalated construction schedules for completion the New York Aquarium used Longhorn Organics Nitrifying Bacteria to quickly and efficiently cycle its new systems.

Scope

Longhorn Organics provided its live nitrifying bacteria solution to the aquarium in order to shorten the cycle time of several new systems from 6 weeks to 1 week. Longhorn performed on site management of the introduction of the bacteria to the systems and the first full cycle.

Spring 2018
